

VALET STROLLER CLIPS®

Please read all instructions before using Valet Stroller Clips.

Before using the diaper bag as a stroller attachment, be sure to determine the safe weight limit of the bag appropriate for the stroller. Refer to the weight limit test as described below.

PLEASE NOTE:

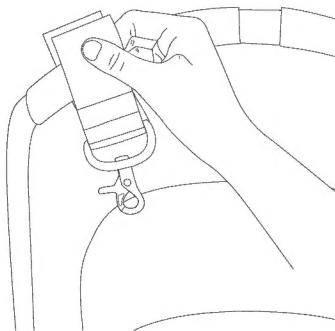

Attachment of a diaper bag that is too heavy may cause the stroller to become unstable and dangerous.

STEP 1

Attaching the clips

- Be sure the stroller is empty and on level ground, with the brake engaged.
- Wrap both stroller clips' fasteners tightly around the stroller's handlebar(s).
- Make sure stroller clips face down and are securely fastened.

STEP 2

Positioning the clips

- Always position stroller clips an equal distance from the center of the handlebar
- Stroller clips' fasteners should be placed as close to the seat back as possible (as far forward as possible)

STEP 3

Attaching the diaper bag

- Attach each stroller clip to the grommets or rings on either side of the bag
- Always attach the loaded diaper bag to a stroller before placing a child in the stroller

WEIGHT LIMIT TEST

- Attach the empty diaper bag to the stroller while stroller is unoccupied
- Once attached, fill bag until the weight of the bag threatens to cause the stroller to become unstable or tip over.
- Always ensure that the bag weighs less than this amount when attaching the bag to the stroller.
